Professional Summary

MuleSoft Developer with 3+ years of experience building scalable and high-performance integration solutions using MuleSoft. Currently working at Accenture in the healthcare domain, delivering business-critical APIs for a global pharmaceutical client.

Strong expertise in API-led architecture, data transformation, and system integrations, with hands-on experience across the full API lifecycle. Proven ability to improve system reliability, automate processes, and deliver efficient, production-ready solutions.

Technical Skills

- **Integration Platform:** MuleSoft (Mule 4), Anypoint Platform
- **Languages:** DataWeave 2.0, Java, Python (Basics)
- **API Development:** REST APIs, API-led Connectivity
- **Tools:** Anypoint Studio, API Manager, Postman, Splunk, ServiceNow, Swagger
- **Protocols:** HTTP, HTTPS, SOAP
- **Data Formats:** JSON, XML, CSV
- **Concepts:** Error Handling, Logging, Transformation, RAML
- **Cloud & CRM:** Salesforce Integration (Basics)

Professional Experience

Accenture

Advanced Application Development Analyst

Duration: January 2023 – Present

- Developed and delivered scalable integration solutions for a global pharmaceutical client, handling high-volume, business-critical data flows.
- Designed and implemented MuleSoft APIs using API-led architecture, ensuring modularity, reusability, and maintainability.
- Took ownership of core features including patient enrollment, SMS/Email opt-in/opt-out, and survey processing, improving system performance and reliability.
- Executed large-scale migrations and upgraded applications from CloudHub 1.0 to 2.0.
- Integrated multiple downstream systems, ensuring high availability, data consistency, and fault tolerance.
- Developed optimized DataWeave scripts for efficient data transformation and processing.

- Implemented robust error handling, monitoring, and alerting mechanisms using Splunk, reducing production issues.
- Automated incident creation and monitoring processes, reducing manual effort and improving response time.
- Applied advanced MuleSoft concepts such as parallel processing, asynchronous flows, transactions, and caching (Object Store) to enhance performance.
- Utilized connectors including Salesforce, Amazon S3, DB, JMS, VM, SFTP, File, and Snowflake.
- Ensured code quality through MUnit testing and maintained CI/CD pipelines using Azure DevOps.
- Contributed to platform upgrades including Mule runtime (4.4 to 4.6) and Java 17 migration.
- Collaborated with cross-functional teams in an agile environment to deliver reliable and high-quality solutions.

Key Achievements

- Led critical modules (AJO/DCT), driving successful migration and system modernization.
- Reduced manual effort in production support through automation of incident creation.
- Improved system reliability by implementing centralized logging and monitoring (Splunk dashboards).
- Delivered reusable API frameworks, improving development efficiency across projects.

Projects

Healthcare Integration Project (Pharmaceutical Client)

- Developed APIs to manage patient services and healthcare workflows.
- Designed system APIs, process APIs, and experience APIs.
- Improved system performance and reduced manual effort through automation.

Certifications

- Salesforce Certified MuleSoft Certified Developer - Level 1 (Mule4, MCD-L1).
- Salesforce Certified Agentforce Specialist
- Salesforce Certified Platform Administrator

Key Strengths

- Strong problem-solving and analytical skills
- Effective communication and teamwork
- Quick learner and adaptable to new technologies
- Detail-oriented with a focus on quality
